PRODUCT INTRODUCTION • 1 OCTOBER 2026

The migration problem

Useful instructions often stay tied to one bot or one file layout.

ThoxEmployee converts the instruction layer into a reviewed profile. It keeps source access and execution authority outside the transfer.

Source labels remain unverified declarations.

CARRIES FORWARD

Name and role

Raw instructions

Declared source and source ID

STAYS BEHIND

Credentials and accounts

Conversation history and memories

Tool permissions and model settings

Supported instruction sources

Source	Accepted input	Transfer scope
Grok	Instruction text	Manual capture from instructions or a bot description you own
Hermes	SOUL.md	One instruction file; archives, config, memories and sessions stay out
Pi	AGENTS.md	One instruction file; other directory scopes are not discovered
Pi	SYSTEM.md	One system prompt file; the reviewer checks destination scope
Other	Markdown or text	Generic instructions with declared identity
ThoxEmployee	Employee JSON	One or more reviewed profiles with source provenance

Third-party names describe compatible instruction sources. They do not indicate account connections, affiliation or endorsement.

The browser review gate

Every instruction stays visible before the user can continue.

- 01 Warnings explain exclusions and identity limits.
- 02 The reviewer removes private information.
- 03 Download and virtual import unlock after acknowledgment.
- 04 Conversion makes no account connection or AI call.

Review every instruction.
1 profile

Read all profiles below. Source labels are declared information, not proof of authorship.

Before you continue

- Review every raw instruction for private information and unwanted behavior. Credential-pattern checks are incomplete.
- Only declared identity, name, role and instructions transfer. Credentials, tools, permissions, models, skills, routines, memories and conversations do not.
- Source labels and IDs are unverified declarations. Import through the destination review flow; conversion does not register an employee or start work.
- Select one SOUL.md instruction file. Profile archives, config, memories and sessions are excluded.
- Name, role and source ID are supplied by you; they are not inferred from conversation history or capability flags.

Ari

Role	Source	Source ID
Planning assistant	hermes-agent	ari-sample

Full instructions

You are Ari, a planning assistant. Turn broad requests into a short plan. State assumptions and leave decisions to the reviewer.

Use only fictional examples. Do not access accounts, execute tools, or claim actions were performed.

☐ I reviewed the full instructions and removed private information.

Download reviewed employee JSON

Import into virtual workspace →

Virtual import is a browser-memory rehearsal. It does not upload to or change the hosted workspace.

A reversible workspace for rehearsal

The imported profile exists in browser memory for the current page. Reloading or leaving clears it.

No upload · No hosted employee · No tool access

Your virtual workspace.

Reset virtual workspace

Rehearsal only. These profiles disappear when you leave or reload this page.

Export format

Hermes SOUL.md

Review instruction export

Exports contain human-readable instructions for manual placement or copying. They do not connect accounts, configure tools or run an agent.

Keep your instructions portable

SOUL.md

Before you continue

- Review every raw instruction for private information and unwanted behavior. Credential-pattern checks are incomplete.
- Only declared identity, name, role and instructions transfer. Credentials, tools, permissions, models, skills, routines, memories and conversations do not.
- Source labels and IDs are unverified declarations. Import through the destination review flow; conversion does not register an employee or start work.
- Select one SOUL.md instruction file. Profile archives, config, memories and sessions are excluded.
- Instruction Markdown contains no name, role or source identity. Keep the THOX JSON alongside it for a profile round trip.
- Saving this file does not install it into the source agent. Review the destination scope and instructions before placing it there.

You are Ari, a planning assistant. Turn broad requests into a short plan. State assumptions and leave decisions to the reviewer.

Use only fictional examples. Do not access accounts, execute tools, or claim actions were performed.

☐ I reviewed this instruction export.

[Download reviewed instructions](#)

A reviewed employee profile can return to a compatible instruction file.

- 01 Choose the employee and destination format
- 02 Read the generated file and warnings
- 03 Acknowledge the export review
- 04 Download and place the file manually

Export does not install, configure or run an agent.

Hosted generation stays a separate, disclosed path

LOCAL TRANSFER

File conversion and the virtual workspace run in browser memory. They do not request AI generation.

HOSTED DEMO

Uploading reviewed JSON stores it in a guest session. Live generation requires explicit consent to external hosted processing.

THOX local runtimes remain a separate product path.

This hosted demo adapts the ThoxEmployee workspace interface and workflow engine. Its MIT copyright and permission notice are retained below. THOX names, marks and other website materials remain subject to the applicable intellectual property terms.

Guest data and live AI

Guest workspace access expires after 24 hours. Before a live run, the demo asks for your agreement to send the task title and brief, selected employee names, roles and instructions, and earlier written handoffs through the THOX-managed hosted inference path. This hosted path uses external infrastructure and model subprocessors; it is separate from THOX local runtimes. Do not submit sensitive information. Clearing a guest workspace does not reset call limits or retract data already sent for inference. Approval records your review decision and performs no external action.

[Terms](#) [Privacy](#) [Intellectual property](#)

Expired workspace content is removed by hourly cleanup. Session and network-address digests enforce limits without storing raw addresses in the demo quota tables; quota records cover the current and previous two UTC dates and older records are removed on the next request or hourly cleanup. Hosting and model subprocessors have their own operational retention policies. See the [THOX privacy notice](#) for the current processing terms.

ThoxEmployee workspace license

The profile transfer tool uses original ThoxEmployee conversion code under the same MIT license. Its file conversion and virtual workspace operate in browser memory, without connecting to source accounts or requesting AI generation. Uploading the resulting JSON to the separate hosted workspace uses that workspace's guest storage and review process. Third-party names describe compatible instruction sources; no affiliation or endorsement is claimed.

MIT License

Copyright (c) 2026 ThoxEmployee contributors

Permission is hereby granted, free of charge, to any person obtaining a copy of this software and associated documentation files (the "Software"), to deal in the Software without restriction, including without limitation the rights to use, copy, modify, merge, publish, distribute, sublicense, and/or sell copies of the Software, and to permit persons to whom the Software is furnished to do so, subject to the following conditions:

The above copyright notice and this permission notice shall be included in all copies or substantial portions of the Software.

Architecture boundaries

NO EXECUTION AUTHORITY

The transfer path never runs tools, shell commands, device mutations or external actions. Approval records the reviewer decision only.

Demo walkthrough

01 Choose a source file

Select Grok text, Hermes SOUL.md, Pi instructions or employee JSON.

03 Acknowledge the review

Remove private information before conversion can continue.

05 Review an optional export

Generate a compatible instruction file and inspect it again.

02 Read every instruction

Confirm the identity, role, source and raw instruction body.

04 Rehearse the profile

Import into the browser-only virtual workspace.

06 Choose the hosted path

Upload reviewed JSON only when a guest workspace is wanted.

Create a task, then review hosted consent before running. Review each contribution. Approve or reject records a decision only.
